Calculations indicate that single-domain particles  
( $r < r_0$ ) at very low concentrations ( $v$ ) will remain  
single domain with an increased density of packing.  
The coercive force ( $H_C$ ) of powders with spherical  
particles does not depend on  $v$ . The  $H_C$  of powders  
with elongated particles at low  $v$  may increase with an  
increase in the density of packing. If so,  $H_C =$   
 $H_{C0}(1 - kv)$  const, for  $v \geq (1/k)$ ; and  $H_C =$  const for
